January 22 - March 21, 2010

Brower Propulsion Laboratory: BPL-003, Moranic Mission To Montana

Reception: Friday January 22nd 5 - 9pm

Lecture & Demonstration: Saturday January 30th

A series of documents, artifacts, and spacecraft from the Brower Propulsion Laboratory (BPL)* will be on view and undergo testing in preparation for BPL's third full-scale exploratory mission: BPL-003, Moranic Mission To Montana. BPL will launch three spacecraft (a lander, a rover, & an airborne 'nanosatellite') near Livingston, Montana in 2010.

*BPL is a quasi-fictitious aerospace company created by Steven Brower in 2007. Brower has used NASA projects as a basis for his own fictionalized versions of spacecraft, space suits, robots, and BPL's corporate structure. The resulting works are a hybrid of American ingenuity and irreverent criticality.
